

Small ThinManager Architecture

Architecture Notes:

- ThinManager server can be co-located with the RDS server.
- Applications to be installed on RDS server, install in Remote Desktop Mode.
- Domain controller is optional, ThinManager can be used in a workgroup environment.
- All thin clients and wireless clients need to be accessible on the network to have content managed by ThinManager.

Redundant ThinManager Architecture

Architecture Notes:

- ThinManager server can be co-located with the RDS servers or can be located on a dedicated machine(s).
- ThinManager is installed on two machines in a redundant system.
- Remote Desktop Services Role installed on two machines to provide application failover.
- FactoryTalk View SE installed on two machines to provide application redundancy.
- Redundant Domain Controllers highly recommended in a redundant system.
- All thin clients and wireless clients need to be accessible on the network to have content managed by ThinManager.
